

Farm/City Essay

The farm and the city might seem really different. But they need each other. This paper is on how the farmers produce things and get them to the city. It is also about how the city makes this produce into things people use. The farm produces something. The produce is sent to the city. The city turns it into something we use, providing not only the product to farmers, but also a profit for the city.

Take wheat, for instance. Farmers grow wheat. The wheat is sent to a mill, where it is turned into flour. The flour is shipped to the city, where it is made into food. The pasta, bread, and baked goods are sold at the grocery store, where it is bought by farmers and other people. Cotton is another crop which everyone needs, is grown by farmers, and the city profits from. Cotton is grown on the farm, then picked and shipped to the city. It is made into cloth, which is made into clothes. The clothes are sold in stores everywhere.

Another thing people use is livestock. Livestock, such as cows, chickens, and pigs, are raised on a farm. Cows provide us with beef and dairy products. Chickens are made into the chicken we eat and lay eggs. Pigs mean ham, bacon, and sausage. All these things and more are processed and sold in the city to farmers and other people.

Trees are grown on tree farms. Trees are used to make paper and wood. Fruit grow on fruit trees. We need wood for telephone poles, pencils, and other wooden things. Paper is used for books and journals. People eat fruit. In school, we use all of these things: wood, paper, and fruit. Maple syrup is also made from trees.

All the time, we use things farmers produce. We eat food pasta, bread, baked goods, beef, dairy products, chicken, eggs, ham, bacon, sausage, maple syrup, and fruit. We use cotton, paper, and wood. All of these things come from the farm. All of these things are also sent to a factory or mill in the city to be processed and sold. So really, the farm and city are very connected.
